

One device. Multiple reports.

Kevah is a powerful software solution that aids SKG in managing sites and assets by completing reports with a handheld PDA on site. This real time information is synchronised to SKG's PC and server where distribution of such data in the form of reports provides managers an objective tool in measuring cleaning performance.

Kevah provides regular, consistent and accurate inspection and reporting, precisely summarising the condition of sites and cleaner performance. Kevah is easy, fast and is a complete cleaning management tool.

Kevah has proved to be very valuable for both SKG and its clients. The accurate reporting of events, the proof of vital information and the time-saving in report writing have been the main benefits of implementing such a simple and useful site management system. Communication back to clients is clearer and more accurate.

Kevah is definitely the way to go. SKG is happy to take the lead.
